Radix Sort for Linked Lists

The keys must be unsigned integers: $r = \text{number base}$
In the examples: $r = 4$ $d = \text{number of digits}$

$$L = \{ 10\overset{\downarrow}{2}, 31\overset{\downarrow}{3}, 03\overset{\downarrow}{0}, 01\overset{\downarrow}{0}, 33\overset{\downarrow}{2}, 10\overset{\downarrow}{3} \} \quad (d=3)$$

$$B_0 = \{ 030, 010 \}$$

$$B_1 = \{ \}$$

$$B_2 = \{ 102, 332 \}$$

$$B_3 = \{ 313, 103 \}$$

$$L = \{ 0\overset{\downarrow}{3}0, 0\overset{\downarrow}{1}0, 1\overset{\downarrow}{0}2, 3\overset{\downarrow}{3}2, 3\overset{\downarrow}{1}3, 1\overset{\downarrow}{0}3 \}$$

$$B_0 = \{ 102, 103 \}$$

$$B_1 = \{ 010, 313 \}$$

$$B_2 = \{ \}$$

distributing sort
according to

digit 1.

(rightmost digit,
least significant
digit)

distr. sort acc. to
digit 2 (from the
right)

$B_3 = \langle 030, 332 \rangle$
 $L = \langle \overset{\downarrow}{1}02, \overset{\downarrow}{1}03, \overset{\downarrow}{0}10, \overset{\downarrow}{3}13, \overset{\downarrow}{0}30, \overset{\downarrow}{3}32 \rangle$ — SORTED acc. to rightmost 2 digits.

$B_0 = \langle 010, 030 \rangle$

$B_1 = \langle 101, 103 \rangle$

$B_2 = \langle \rangle$

$B_3 = \langle 313, 332 \rangle$

$L = \langle 010, 030, 101, 103, 313, 332 \rangle$ — SORTED (acc. to rightmost 3 digits & all the digits)

$$\underline{T_{\text{Radix Sort}}(n, d, r) \in \mathcal{O}(d \times (r + n)) = \underline{\mathcal{O}(n)}}$$

In practice d and r are constants.

Radix Sort for Arrays

$A = \langle 02, 03, 10, 13, 32, 30, 12 \rangle$

	C	02	03	10	13	32	30	12	Σ	12	30	32	13	10	03	02
0.	0			1			2		2		1			0		
1.	0							2	2							
2.	0	1				2		3	5	4		3				2
3.	0		1		2			7					6		5	

Counting sort according to the 1. digits of the numbers

$B = \langle 10, 30, 02, 32, 12, 03, 13 \rangle$
 0. 1. 2. 3. 4. 5. 6.

	C	10	30	02	32	12	03	13	Σ	13	03	12	32	02	30	10
0.	0			1			2		2		1			0		
1.	0	1				2		3	5	4		3				2
2.	0								5							
3.	0		1		2				7				6		5	

Counting sort acc. to the 2. digits of the numbers

$A = \langle 02, 03, 10, 12, 13, 30, 32 \rangle$ — SORTED ✓
 0. 1. 2. 3. 4. 5. 6.

In programming often: $r = 256$ (1 byte is 1 digit)

One digit $\in 0..r-1$

$d = 4 \vee d = 8$

$C[0..r-1]$ is the counter
