## Simple one-way lists (S1L)

$L \rightarrow [5] \rightarrow [2] \rightarrow [7] \rightarrow [3] \square$  } (Empty list:  $L = \emptyset$ )

$A : N[\cdot] = [5|2|7|3]$  } ALTERNATIVE REPRESENTATIONS  
OF THE ABSTRACT SEQUENCE

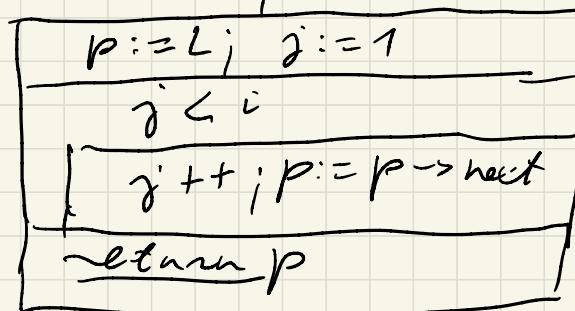

LINKED REPRESENTATION

SEQUENTIAL REPR.  $\{5, 2, 7, 3\}$

$A[i]$  - refers directly to the  $i$ th element :  $\Theta(1)$  time

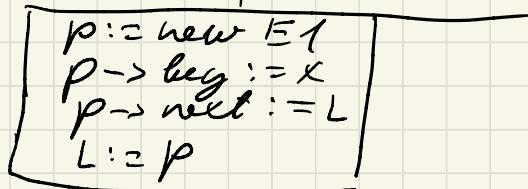

$L[i]$  is not possible.

(element( $L : E1^*$ ;  $i : N$ ) :  $E1^*$ )

$\Theta(i)$  time

(insert-at-front( $L : E1^*$ ;  $x : N$ )

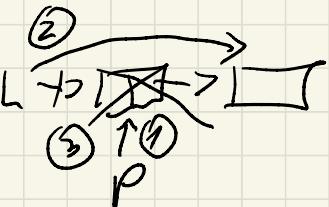

$q := \text{element}(L, i); \text{print}(q \rightarrow \text{begin}) \quad x$

delete\_first(&L: E1\*)

```

    P := L
    L := L -> next
    delete p
  
```

MEMORY

LEAKING,

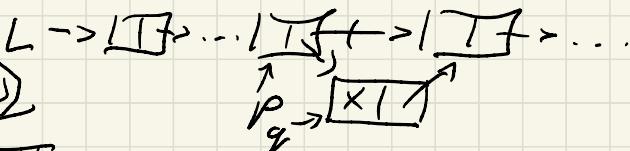

if forgotten

delete\_next(p: E1\*)

```

    q := p->next
    p->next := q->next
    delete q
  
```

follow(p: E1\*; x: N)

```

    q := new E1
    q->key := x
    q->next := p->next
    p->next := q
  
```

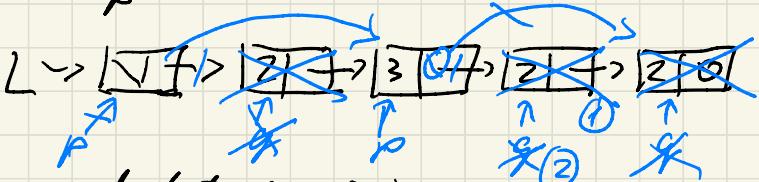

One-way lists with sentinel head (H1L)

$\langle 5, 2, 7, 3 \rangle$  is represented :  $L \rightarrow \boxed{\text{header}} \rightarrow \boxed{5} \rightarrow \boxed{2} \rightarrow \boxed{7} \rightarrow \boxed{3} \rightarrow \boxed{\emptyset}$

(delete\_all(L: E1\*; x: N))

```

    P := L
    P->next != &
      P->next->key = x
      delete-next(p) | P := P->next
    
```

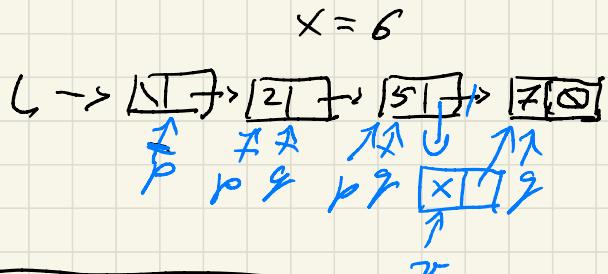

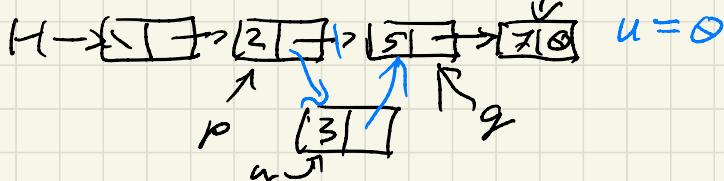

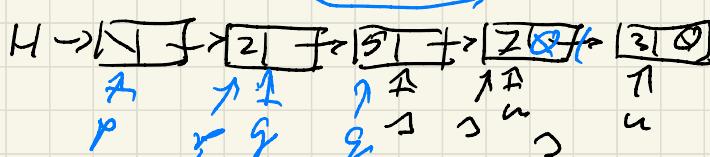

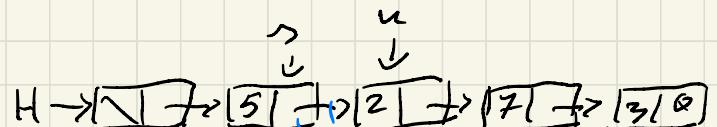

delete (L, 2)

Empty Lds f:  $L \rightarrow \boxed{\emptyset}$

## Sorted\_Insert(L: E1x; x:N)

```

p := L; q := L->next
q != Ø & q->key < x
  p := q; q := q->next
n := new E1
n->key := x
n->next := q
p->next := n
    
```

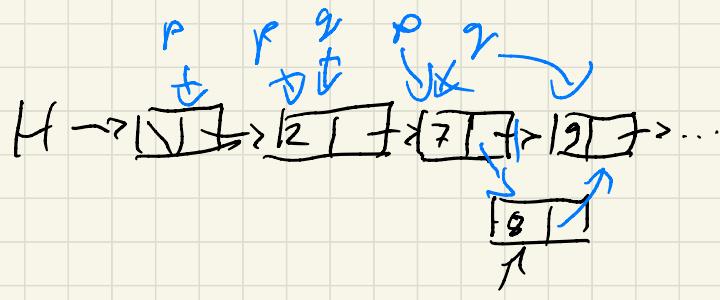

## Insertion Sort(H: E1x)

```

s := H->next
s != Ø
  u := s->next
  u ≠ Ø
    s->key ≤ u->key ?
      s->next := u->next
      u := sorted_insert(H, u)
    u := s->next
    
```

$$AT(n), MT(n) \in \Theta(n^2)$$

$$mT(n) \in \Theta(n)$$

$$\begin{aligned}
 MT_{IS}(n) &= 1 + \underbrace{n-1}_{n} + \underbrace{n-1}_{n} + \\
 &+ 0 + 1 + 2 + 3 + (n-2) \\
 &= \sum_{i=0}^{n-1} i = \frac{n(n+1)}{2} = \frac{1}{2}n^2 + \frac{1}{2}n \in \Theta(n^2)
 \end{aligned}$$

$$\begin{aligned}
 AT_{IS}(n) &= \overbrace{n + (n-1)}^{2n-1} + \frac{0 + 1 + 2 + \dots + (n-2)}{2} = n(n-1) + \frac{(n-1)(n-2)}{2} = \\
 &= \frac{1}{2}n^2 + 1\frac{1}{2}n - \frac{1}{2} \in \Theta(n^2)
 \end{aligned}$$

Sorted-Insert(H, u)

```

p := H; q := H->next
q->key ≤ u->key
p := q; q := q->next
u->next := q
p->next := u
    
```

## Queue
